CHÊNE-BOURG

(GENEVA) SWITZERLAND

## NOTICE

To our new customers:

The acclimatation of the alpine flora in gardens was started in 1875 by Mr. Henry Correvon in the old family garden at Yverdon (Vaud). The Nursery was established in 1828 by Mr. J. Züttel, grand-father of

Mr. H. Correvon, and it was moved to Geneva in 1879.

We are growing a large collection of mountain and perennial plants and we supply seeds and plants to botanists and garden lovers in all parts of the world. Experimental stations on the Jura mountain and on the Alps, as well as "Floraire" gardens near Geneva, enable us to collect seeds of even the rarest plants and to provide them fresh to our customers. As they are all collected in our gardens or in Nature by our own people, they are true to name and reliable. All our seeds are certain to germinate if cultural directions given below are followed. Please remember, that many species are of slow germination. Such packets are usually marked with a cross ( × ).

Our gardens at Floraire are open to the public every day. Another one at "La Chèvrerie." (Jura mountain, railway-line Nyon-St. Cergue) is open to visitors from May to October. It can be reached with motors. We also publish a large list of alpines, shrubs, bog plants, perennials,

We also publish a large list of alpines, shrubs, bog plants, perennials, hardy orchids, ferns and cacti. Amateurs will be especially interested with our lists of Androsace, Campanula, Dianthus, Gentiana, Primula, Saxifraga, Sedum and Sempervivum, of which we have the largest known collections.

## CONDITIONS OF SALE

#### **TERMS**

All orders must be accompanied by remittance. Payment can be made by check, by English or American banknotes sent in a registered letter, or by international post money orders.

Seed orders amounting 10 francs are sent post-paid.

#### PRICE OF EACH PACKET

Each seed packet costs swiss fr. 0.80 (\$0.20; 10d). They are good sized packets but rare species have less seeds in them.

#### FOR BEGINNERS

Some amateurs are not used to latin or specific names. They should leave us make up a selection for them, for the following places or purposes:

Rock and alpine gardens, Alpine meadows, Woodlands, Barren slopes, Walls, Bogs, Herbaceous borders. Heavy, limy or acid soils, Carpeting plants, Aromatic plants, herbs, Melliferous plants (for bees), Cut flowers, Perennials, Shrubs for rockery.

#### PRICES OF COLLECTIONS (our own selection)

	Sw. fr.	\$.	Sh.	
10 Best kinds (above)	6.—	1.40	6/-	)
$\frac{20}{20}$ ,, ,,	10.50	2.50		post-paid
50 ,, ,,	25.—	5.60	23/-	

Also 10 or 20 best Campanula, Dianthus, Gentiana, Primula, Saxifraga, Sedum or Sempervivum.

On request we will keep a list of species supplied, so that every year the collection can be enlarged.

As we are anxious to furnish seeds for the right location, please give us an idea of the climate, altitude and exposure.

#### IMPORTANT:

Write your name and address clearly and fully on every order and letter. We frequently receive orders with unreadable or incomplete addresses which we therefore cannot fill. As a rule we do not acknowledge orders which are mailed within one week.

# **ABRÉVIATIONS**

Ab = Plantes mellifères. — For bees.

Aq = Plantes aquatiques. — Water plants.

Ar = Pour pentes sèches et arides. - For dry slopes and barren places.

Arom = Pl. aromatiques. — Aromatic plants.

Arb = Arbustes pour rocailles. — Rockery shrubs.

Arbr = Arbres. — Trees.

Bord = Plantes à bordure. — Dwarf borders.

Env = Plantes envahissantes. — Invading.

Gr = Plantes grimpantes. — Climbing plants.

H = Humidité. — For moisture.

Med. = Plantes médicinales. — Medicinal herbs.

O = Plante d'ombre. — Plants for shade.

½ O = Mi-ombre. — Half shade.

Pal = Pour marécage. — Bog.

Pr = Pour prairie alpestre. — For the "Swiss meadow."

R = Plantes de rochers. — Rock plants.

S = Plantes aimant le soleil. — Sun-loving plants.

Sp = Culture dans le Sphagnum. — Sphagnum culture.

N = A planter au Nord. — Northern location.

T = Tourbière — English « moraine »

T = Tourbière. — English « moraine ».

V = Plantes vivaces. — Hardy perennial.

Tap = Tapissantes. — Carpeting.

☐ = Espèce de culture spéciales. — Special culture.

Λ = A protéger l'hiver (sous climat Genève). — Tender.

/// = Plantes pour les murs. — Plants for walls.

+ = Meilleures espèces pour fleur coupée. - Best for cut flowers.

⊙ = Annuelle. — Annual.

of = Bisannuelle. — Biennial.

Mi = Graines récoltées dans le Midi. — Collected in South Europe.

Pyr = Récoltées dans les Pyrénées. — Collected in the Pyrenees.

N. B. — Nous marquons généralement (×) sur les sachets d'espèces lentes à germer.

We usually mark  $(\times)$  on the seed packets slow to germinate.

### INSTRUCTIONS FOR SOWING

Most of our seeds, especially those for herbaceous borders, can be treated just like cabbage or carrot seeds. However, the seeds of more difficult species and of true alpines require a little more care.

- The Soil. Prepare a light sandy soil with just enough nourishment for the growth of very young plants. For most seeds, use one third peat or leaf mould, one third good loam, and one third sand (granitic or calcareous according to requirement). Mix throughly and sift.
- Small Seeds. For very small seeds, like Saxifraga, Sedum, Sempervivum, etc., use one half humus and one half sand. These must be barely covered with soil, or just pressed in with a board, and care must be taken not to wash them away when watering.
- The Seed Bed. Sow in pots, pans, or boxes, with a layer of gravel or small stones at the bottom to insure perfect drainage. Keep these in a cold frame (not a hotbed) or in any cool and partially shaded place. Keep moist all the time and as evenly as possible.
- Warm Climates. For continental and dry climates, it is advisable to place a layer of sphagnum moss just above the gravel at the bottom of the pan or box. This helps to regulate the moisture. In southern climates it should also be mixed with the soil (sifted or broken up) in place of the humus.
- Time of Sowing. The best time to sow alpines is the very late autumn (just before frost) or early spring. Where it is possible, cover the beds with snow for a week or two and expose to the heat suddenly. The action of the snow hastens germination to an extraordinary degree.
- Transplanting. It is better not to sow directly in the rock garden or in the beds—although this can be done in cases of naturalization in walls, woodlands, or fields. The seedlings should be transplanted once before being put in their definite places.
- For more details see: "Rock Gardens and Alpine Plants" by H. Correvon, in which the special need, manner of growth and location are given for each plant.

# How would you plant this?

## A suggestion for your rock garden

We have selected 24 varieties, of rather easy culture. They are disposed in this rockery in order to alternate colours and time of flowering. Such a collection will give you flowers for a great part of the year.

Price: 24 var. \$ 3.00 postpaid

- 1) Aster alpinus
- 2) Lychnis alpina
- 3) Hypericum Coris
- 4) Viola florariensis
- 5) Geum Heldreichii
- 6) Saxifraga cochlearis
- 7) Dianthus Roysii
- 8) Lithospermum graminifolium
- 9) Papaver alpinum
- 10) Linum campanulatum
- 11) Silene Schafta
- 12) Campanula turbinata

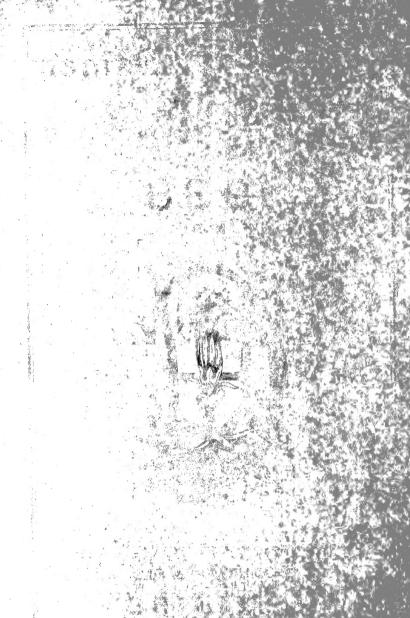

- 13) Saponaria Boissieri
- 14) Androsace vitaliana
- 15) Erinus alpinus
- 16) Genista horrida
- 17) Campanula garganica
- 18) Leontopodium alpinum
- 19) Edraianthus graminifolium
- 20) Gypsophila rosea
- 21) Iberis saxatilis
- 22) Alyssum compactum
- 23) Veronica spicata nana
- 24) Aethionema grandiflorum

Un nouveau livre de M. H. Correvon:

# FLORAIRE

un beau volume illustré de 15 planches avec 145 pages de texte.

Ce volume est destiné à faire connaître les plantes des montagnes et l'histoire de leur introduction dans les jardins. Il donne l'historique de la fondation de «Floraire » à Yverdon en 1827 par son grand-père maternel et du développement de cette institution par lui-même, et son transfert à Genève en 1879. Voici les principaux chapitres traités:

Ma vocation de jardinier. — Mes débuts comme patron horticulteur. — Le transfert à Genève. — Les premiers jardins botaniques alpins. — Floraire. — Murs fleuris. — Irrigation, bassins, tourbières. — Gazons fleuris. — La Pergola. — Quelques-unes de nos spécialités. — Les fougères à Floraire. — Les Orchidées de plein air. — La Chèvrerie. etc.

Prix: francs suisses 7.50
